

Project Design Phase-I
Solution Architecture

Date	19 September 2022
Team ID	PNT2022TMID47877
Project Name	Project - Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence
Maximum Marks	4 Marks

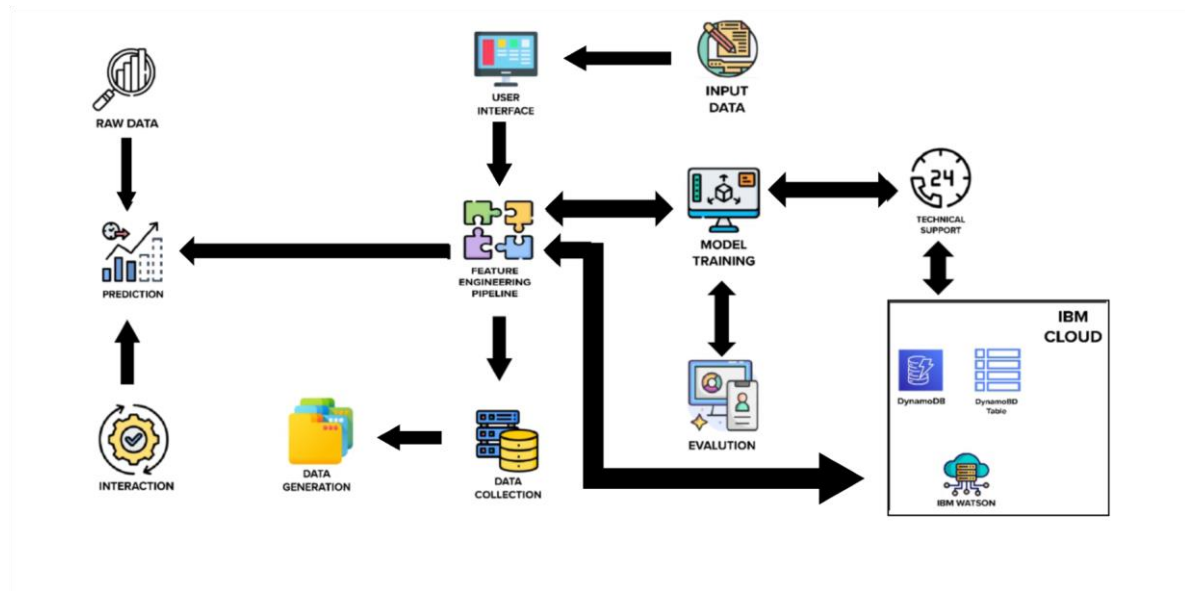

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed and delivered.

- Design an architecture that achieves the recovery time and recovery point objective business needs.

Example - Solution Architecture Diagram:
